65 **Preface**

66 This document is produced by the Global Harmonization Working Party, based on change
67 management guidances worldwide. The document is intended to provide non-binding guidance for
68 use in the regulatory system of medical devices, including in vitro diagnostic (IVD) medical devices
69 and software as medical device, and has been subject to consultation throughout its development.

70 There are no restrictions on the reproduction, distribution, translation or use of this document.
71 However, incorporation of this document, in part or in whole, into any other document does not
72 convey or represent an endorsement of any kind by the Global Harmonization Working Party.

73

74 **1.0 Introduction**

75 The objective of the Global Harmonization Working Party (GHWP) is to encourage
76 convergence at the worldwide level in the evolution of regulatory systems of medical devices,
77 including in vitro diagnostic (IVD) medical devices and software as a medical device in order to
78 protect the public health by those regulatory means considered the most suitable.

79 This document has been developed to encourage and support global convergence of regulatory
80 systems. It is intended for use by Regulatory Authorities (RAs), Conformity Assessment Bodies
81 (CABs) and industry, and will provide benefits in establishing, in a consistent way, an economic
82 and effective approach to the control of medical devices in the interest of public health. It seeks to
83 strike a balance between the responsibilities of RAs to safeguard the health of their citizens and
84 their obligations to avoid placing unnecessary burdens upon the industry.

85 During the life-cycle of a medical device, changes may take place from time to time. Changes
86 made to a registered medical device must be linked to the principles of safety and/or performance
87 (Essential Principles) and the ability of a risk based regulatory system to control the risk of the
88 medical device placed in the market.

89
90 To ensure continued safety and/or performance/effectiveness of the medical device, a
91 manufacturer must assess the effect of the change on the patient, practitioner and/or user of the
92 medical device, and decide whether the change is expected to affect the safety and/or
93 performance/effectiveness of the medical device.

94
95 According to the nature of the change, the Regulatory Authority (RA) will determine whether
96 evidence of safety and/or performance/effectiveness has been appropriately collected and reviewed
97 by the manufacturer based on the report made by the manufacturer.

98
99 Working Group 1, 2 and 3 of the GHWP have prepared this guidance document. Comments or
100 questions should be directed to the Chair of GHWP Work Group 2 whose contact details may be
101 found on the GHWP web page (<http://www.ghwp.info/>).

102 Note: The term “Registered medical device” refers to a medical device that can be legally
103 marketed in the relevant jurisdiction.

104

105 **2.0 Rationale, Purpose and Scope**

106 **2.1 Rationale**

107 Risk based and harmonised worldwide requirements for managing changes to registered
108 medical devices would offer significant benefits to the manufacturer, the users, the patients and the
109 RAs. Eliminating or reducing differences between jurisdictions can decrease the cost of regulatory
110 compliance activities, increases regulatory resource efficiencies for RAs and allows patients earlier
111 access to new technologies and treatments.

112

113 **2.2 Purpose**

114 This document assists RAs and manufacturers in assessing and managing changes during the
115 life cycle of medical devices. The document provides guidance on general principles,
116 categorization, reporting, and alternative pathways for managing changes using a risk based
117 approach with examples.

118

119 **2.3 Scope**

120 This document applies to all products that fall within the definitions of Medical Device, In
121 Vitro Diagnostic (IVD) Medical Device and Software as a Medical Device that appear within the
122 AHWP document *Definition of the Terms 'Medical Device' and 'In Vitro Diagnostic (IVD) Medical*
123 *Device'*.

191 of WHO Technical Report Series, No. 1003

192

193 **4.0 Definitions**

194 **Medical Device** - The term is as defined in AHWP/WG2-WG1/F001:2016 “Definition of the Terms
195 ‘Medical Device’ and ‘In Vitro Diagnostic (IVD) Medical Device’

196 **IVD Medical Device** - The term is as defined in AHWP/WG2-WG1/F001:2016 “Definition of the
197 Terms ‘Medical Device’ and ‘In Vitro Diagnostic (IVD) Medical Device’”

198 **Software as a Medical Device**– The term is as defined in AHWP/WG3/F001:2015 Guidance
199 Document on Medical Device Software - Qualification and Classification

200 **AI/ML**– The term is as defined in IMDRF/AIMD WG/N67 Machine Learning-enabled Medical
201 Devices- Key Terms and Definitions as Machine Learning-enabled Medical Device (MLMD) A
202 medical device that uses machine learning, in part or in whole, to achieve its intended medical
203 purpose

204 **Manufacturer**- For the purpose of this document, the term "manufacturer" must be understood to
205 include the manufacturer, its authorized representative or any other person who is responsible for
206 placing the device on the market.

207 **Intended use/intended purpose** - The term is as defined in *GHTF/SG1/N045:2008* /
208 *GHTF/SG1/N68:2012* / *GHTF/SG1/N70:2011* / *GHTF/SG1/N77:2012* / *GHTF/SG5/N6:2012*

209 **Non-significant change**¹ - A change that will not affect safety and/or performance/effectiveness of
210 the medical device.

¹ The terms non-significant change and minor change are used in different jurisdictions but generally they can be used interchangeably.

211 **Quality Control (QC)** -It is part of quality management focused on fulfilling quality requirements.
212 (ISO 9000)

213 **Quality Management System (QMS)** - For the purpose of this guidance document, the term means
214 the claimed compliance with ISO 13485 or its equivalent of the part the management system with
215 regard to quality.

216 **Regulatory Authority-** It is a government agency or other entity that exercises a legal right to
217 control the use or sale of medical devices within its jurisdiction, and may take enforcement action
218 to ensure that medical devices marketed within its jurisdiction comply with legal requirements.
219 (AHWP/-WG2-WG8/F002:2014

220 **Risk Management** - is a systematic application of management policies, procedures and practices
221 to the tasks of analysing, evaluating, controlling and monitoring risk (ISO 14971:2019 Medical
222 devices -- Application of risk management to medical devices)

223 **Facility** - means a site that is substantially involved in the manufacture or design and storage of a
224 medical device

225 **Recognition** - The acceptance of the regulatory decision of another regulator or other trusted
226 institution. Recognition should be based on evidence of conformity that the regulatory requirements
227 of the reference health authority is sufficient to meet the regulatory requirements of the relying
228 authority. Recognition may be unilateral or mutual and may, in the latter case, be the subject of a
229 mutual recognition agreement.

230 **Reliance** - The act whereby the National Regulatory Authority (NRA) (defined as Regulatory
231 Authority in this document) in one jurisdiction may take into account and give significant weight
232 to assessments performed by another NRA or trusted institution, or to any other authoritative
233 information in reaching its own decision. The relying authority remains independent, responsible
234 and accountable regarding the decisions taken, even when it relies on the decisions and information
235 of others. (WHO definition - Good reliance practices in regulatory decision-making: high-level
236 principles and recommendations)

237 **Reference Agency** /Reference regulatory authority – A supranational, national or regional
238 authority or a trusted authority such as WHO prequalification (WHO PQ) whose regulatory
239 decisions and/or regulatory work products are relied upon by another regulatory authority to inform
240 its own regulatory decisions. (WHO definition - Good reliance practices in regulatory decision-
241 making: high-level principles and recommendations)

242 **Significant Change²** - means a change that could reasonably be expected to affect the safety and/or
243 performance/effectiveness of a medical device.

244 **System** – A medical device system comprises of a number of medical devices/IVD medical devices
245 and/or accessories that are: from the same product owner/manufacture, intended to be used in
246 combination to achieve a common intended purpose, compatible when used as a system and sold
247 under a single system name or the labelling, IFU, brochures or catalogues for each constituent
248 component indicates that the constituent component is intended to be used together or for use with
249 the system (Singapore- Medical Device Guidance- GN-12-1 - Guidance on Grouping of Medical
250 Devices for Product Registration – General Grouping Criteria)

251

² The terms significant change and major change are used in different jurisdictions but generally they can be used interchangeably

252 5.0 General Principles

253 For any change made to an approved or registered Medical Device, In Vitro Diagnostic (IVD)
254 Medical Device and Software as a Medical Device, the manufacturer must consider the device in
255 question, the impact of the change on the patient, practitioner and/or user of the device, and the
256 impact of the change on the intended use/indication for use, risk classification, and the
257 specifications of the device, and decide whether the change could reasonably be expected to affect
258 the safety and/or performance/effectiveness of the device and risk-benefit associated throughout its
259 lifecycle.

260
261 In the case of multiple simultaneous changes, this guidance document should be utilized to aid
262 in the assessment of each change individually, as well as to evaluate the cumulative impact of all
263 changes collectively. Concurrently, a risk assessment should be conducted to ensure a
264 comprehensive review and implementation of mitigation means.

265
266 There may be instances where the standard regulatory framework is inadequate for addressing
267 unique characteristics of emerging technologies, therefore effective risk analysis approach should
268 be considered by regulatory authorities to address these novel challenges.

269
270 The following sections give guidelines on assessment and categorisation, reporting and
271 innovative pathways for changes

272
273

274 6.0 Categorisation and Assessment of Changes

275 6.1 Categorisation of Changes

276 Changes to a registered medical device are categorised as significant (or major in some
277 jurisdictions) and non-significant (or minor) change according to the impact on the safety
278 and/or performance/effectiveness of the medical device.

279
280 A **significant change** (refer to definition of “significant change”) means a change that could
281 reasonably be expected to affect the safety and/or performance/effectiveness of a medical device.

282
283 Significant changes can include changes to any of the following:

- 284
- 285 (a) the manufacturing process, facility or equipment;
 - 286 (b) the manufacturing quality control procedures, including the methods, tests, reference or
287 procedures used to control the quality, purity and sterility of the device or of the materials used
288 in its manufacture;
 - 289 (c) the design of the device, including its performance characteristics, principles of operation and
290 specifications of materials, energy source, software or accessories; and
 - 291 (d) the intended use/indication for use of the device, including any new or extended use, any
292 addition or deletion of a contra-indication for the device, and any change to the period used to
293 establish its expiry date

294
295 A significant change typically may:

- 296 • Result in risks to the patient not previously identified
- 297 • Increase the probability of existing hazards occurring

- 298 • Alter the presentation of existing or new risks to the user (this can involve
299 labelling changes or new indications for use)

300
301 A **non-significant change** that will not affect safety and/or performance/effectiveness of the
302 medical device.

303
304

305 6.2 Tools to Assess Changes and the Way of Reporting

306 The following section presents flowcharts to assist manufacturers when assessing whether a
307 change is considered a “significant change” which may need to be reported to the RA.

308

309 The **main flowchart** is a generalized discussion of the broad principles that can be used to
310 determine if a change would affect the safety and/or performance/effectiveness of a Medical
311 Device, In Vitro Diagnostic (IVD) Medical Device and Software as a Medical Device.

312

313 **Flowchart A to F** details specific questions and answers to assist in determining if a change is
314 considered significant or non-significant. The accompanying discussions and flowcharts are
315 intended to define the processes used to categorise the change.

316

317

318 The following flowcharts are given in Appendix 1.

319

- 320 • **Main Flowchart:** General Changes made to Medical Devices and In Vitro Diagnostic
321 (IVD) Medical Devices
- 322 • **Flowchart A:** Changes in Manufacturing Processes, Facility and/or Quality
323 Management System (including QC) for Medical Devices and In
324 Vitro Diagnostic (IVD) Medical Devices
- 325 • **Flowchart B:** Changes in Design for Medical Devices and In Vitro Diagnostic
326 (IVD) Medical Devices
- 327 • **Flowchart C:** Changes to Sterilisation Facility and its Process and/or Quality
328 Management System
- 329 • **Flowchart D:** Changes to Software for Medical Devices
- 330 • **Flowchart E1:** Changes in Materials for Medical Devices
- 331 • **Flowchart E2:** Changes in Materials for In Vitro Diagnostic (IVD) Medical
332 Devices
- 333 • **Flowchart F:** Changes to Labelling of Medical Devices and In Vitro Diagnostic
334 (IVD) Medical Devices

335

336

337

338 **7.0 Reporting of Changes**

339 According to the nature of the change, it is the RA that determines whether evidence of safety
340 and/or performance/effectiveness have been appropriately collected and reviewed based on the
341 reporting procedure made by the manufacturer.

342
343 It is recommended that the regulatory authority take **a risk-based approach in change**
344 **management reporting** and prioritize resources to focus on **higher risk products with significant**
345 **changes** that raise the highest risk to patients to ensure optimal efficiency of regulatory resources.

346
347 “Significant changes” should be reported to the RA prior to implementation of the change with
348 supporting documentation to show the device is still safe and performing as intended.

349
350 “Non-Significant changes” are not normally reported to the RA prior to implementation of the
351 change, however the assessment and supporting documentation to show the device is still safe and
352 performing as intended has to be reflected in the QMS system and product documentation.

353
354 **Table 1** depicts the recommended risk-based approach in reporting of changes.

355
356 A manufacturer is required to submit a license amendment or change registration to Regulatory
357 Authority for review and approval once they have determined that the proposed change to a higher-
358 risk medical device is a significant change. For higher-risk devices with significant changes,
359 manufacturers may sell and/or import the modified medical device in the market, only upon receipt
360 of approval of changes by the regulatory authority.

361
362 **Note:** The need to report changes prior to implementation vs reporting post-implementation
363 can depend on factors such as the type of change and regional requirements.

364

365
366

Table 1: Recommended Risk-Based Approach in Reporting of Changes

Product Risk Classification	Non-Significant Changes	Significant Changes
Low risk	No submission required Change to be documented in QM	No submission required/documented in QMS
Medium risk		Change registration or change notification required (change notification with immediate implementation is recommended)
Medium/High Risk		License amendment or change registration required (change submission with RA approval recommended)
High risk		

Note 1: In some jurisdictions, all changes whether significant or non-significant may need to be reported, hence it is recommended to consult local jurisdiction and guidance on the reporting requirements

Note 2: QMS requirement: Manufacturer should

- assess the change
- perform risk benefit of the product
- document the change and if applicable update the technical documentation

367
368

369 7.1 Bundling of Changes

370 7.1.1 Multiple changes on a device at the same time

371 It is recommended if multiple changes are made on a device at the same time; the assessment
372 of each change should be made according to the flowcharts outlined in this guideline. If the changes
373 are significant, the manufacturer may summarize all changes in one report and describe how the
374 modified medical device differs from the previously registered device.

375 A significant change is only one type of change that may require a manufacturer to obtain an
376 amended medical device license or change registration approval. When several successive or
377 simultaneous changes are being considered in the evolution of a licensed device, this guidance
378 document should be used to assess each change separately, as well as the collective impact of the
379 changes. A side-by-side comparison of the proposed changes to the currently licensed device may
380 be useful.

381 Hence, it is recommended that regulatory authorities **allow the submission of multiple**
382 **changes to the same product in a single submission** to enable assessment the collective impact
383 of the changes.

384
385
386
387

388 **7.1.2 Single/same change to multiple products**

389

390 If the same general simple change such as legal entity name change, legal manufacturer's
391 address and other changes happen to multiple products of a manufacturer, the change across the
392 products may be bundled to register or report once for all in a single submission.

393 Additionally in cases where the medical device is licensed as a **system**, changes may be
394 proposed to one or more of the component parts. This document should be used to assess each
395 change separately, as well as the collective impact of the changes.

396

397 **7.2 Supplementary Submission**

398 It is recommended that regulatory authorities allow the submission of other changes to the same
399 product or product group, which is under RA review for a prior change or license renewal. RAs
400 allow to review one change to a given device while other changes to that same device are under
401 review. The newly submitted change should not be predicated on regulatory acceptance of the prior
402 change (because regulatory acceptance of the earlier change cannot be assumed)

403 Note: Each change should not affect each other

404

405 **7.3 Transition Measures and Time Period for Change Implementation**

406 It is recommended for regulatory authorities to allow a reasonable transition period for
407 manufacturers to transition from the old version to the new version. During such transition period,
408 **import and/or sales/distribution of both versions should be allowed** to facilitate smooth
409 transition as well as ensure supply continuity. Both versions of the medical device have to conform
410 to the Essential Requirements for Safety and Performance for medical devices as stipulated in the
411 *Regulations*.

412

413 When there are multiple versions of a device legally available, perhaps due to marketing both
414 or because one is going through such a transition period, it should be clear how patients/users will
415 be informed of the version of the device they are using/have access to and any necessary information
416 about the differences

417

418 Hence, the manufacturer shall ensure that appropriate mechanisms are in place to differentiate
419 and identify the changed device from the original version based on device or manufacturing
420 attributes (e.g. through batch/ lot/ serial number and manufacturing date), and maintain relevant
421 inventory records on file to ensure traceability of both versions as part of their QMS requirements.
422 All relevant records on file shall be made available to the RA upon request.

423

424 **8.0 Innovative Pathways for Changes**

425 As the technologies evolve, so do the regulatory science, RA may consider innovative
426 pathways for changes where appropriate on a risk-based approach.

427 **8.1 Reliance/Recognition**

428 As indicated in the WHO Guidance for Good Reliance Practice, reliance models are
429 recommended for regulatory authorities to handle both pre-market and post market responsibilities
430 related to the device full life cycle, including product changes.

431 Hence, it is recommended that regulatory authorities could recognize change approvals from a
432 **reference agency** in order to facilitate local access to more rapid innovation. This may require
433 Mutual Recognition Agreements. Where some Regulatory Authorities may not directly recognize
434 approvals by a **reference agency**, they could still rely on evidence used in a device change
435 previously approved by another regulator in order to reduce duplicative efforts, as well as the time
436 and resources needed for review.

437 **8.2 Replacement Reagent and Instrument Family Policy**

438 Additional innovative review pathways are also encouraged to expedite device availability for
439 patients. For example, the ***GHWP Replacement Reagent and Instrument Family Policy*** expedites
440 availability of medium risk assays onto instruments within the same family. Assay Migration
441 provides a more efficient pathway to migrate a assay to a new, already cleared instrument by
442 leveraging a limited dataset.

443 The Reagent Replacement Policy is a risk-based approach that relies on the manufacturer's
444 Quality Management System (QMS), including risk-based assessments, and criteria, testing, and
445 internal documentation for each reagent application, to allow a portfolio or "menu" of low or
446 medium risk reagents to be moved to a previously approved instrument or an instrument in the
447 instrument family.

448 In the Instrument Family Policy an instrument can be added to an already existing Instrument
449 Family. In turn, the Instrument Family allows the Replacement Reagent Policy to take effect.

450 For adding either an approved test kit/assay to a previously approved instrument (Replacement
451 Reagent Policy), or a new instrument family member to a previously approved instrument family
452 (Instrument Family Policy), please refer to the GHWP guidance document on ***The Replacement
453 Reagent and Instrument Family Policy***.

454 **8.3 Simplified Change Management of Software as Medical Devices**

455 Given the need to frequently update and localise software, a simplified change management
456 framework can enable agile modifications while maintaining a high-level of safety. Changes to
457 software as medical devices can be managed by restricting the scope that needs regulatory review,
458 limiting it to changes that relate to major functions, such as analysis algorithms (analysis methods),
459 development language, operating environment, or communication functions. Other changes can be
460 reasonably reported after the modifications have been implemented (South Korea - Regulations on
461 Approval, Notification, Review of Medical Devices, June-2023)

462 **8.4 Pre-determined Change Management Protocol (PCMP) of Software as Medical**
463 **Devices**

464 Pre-determined Change Management Protocols (PCMP) allow regulators to review a list of
465 proposed changes, a change protocol (how the change will be implemented) and related acceptance
466 criteria during the initial premarket review, essentially pre-approving the change as long as the
467 protocol and criteria are followed. PCMP serves as an “agreement” between a manufacturer and
468 regulator that, if the manufacturer follows the protocol for changes within its scope and meets the
469 agreed upon criteria, the manufacturer can implement the modification without further regulatory
470 review. (US Draft Guidance for Industry and Food and Drug Administration Staff – Marketing
471 Submission Recommendations for a Predetermined Change Control Plan for Artificial
472 Intelligence/Machine Learning (AI/ML)-Enabled Device Software Functions – April 2023)

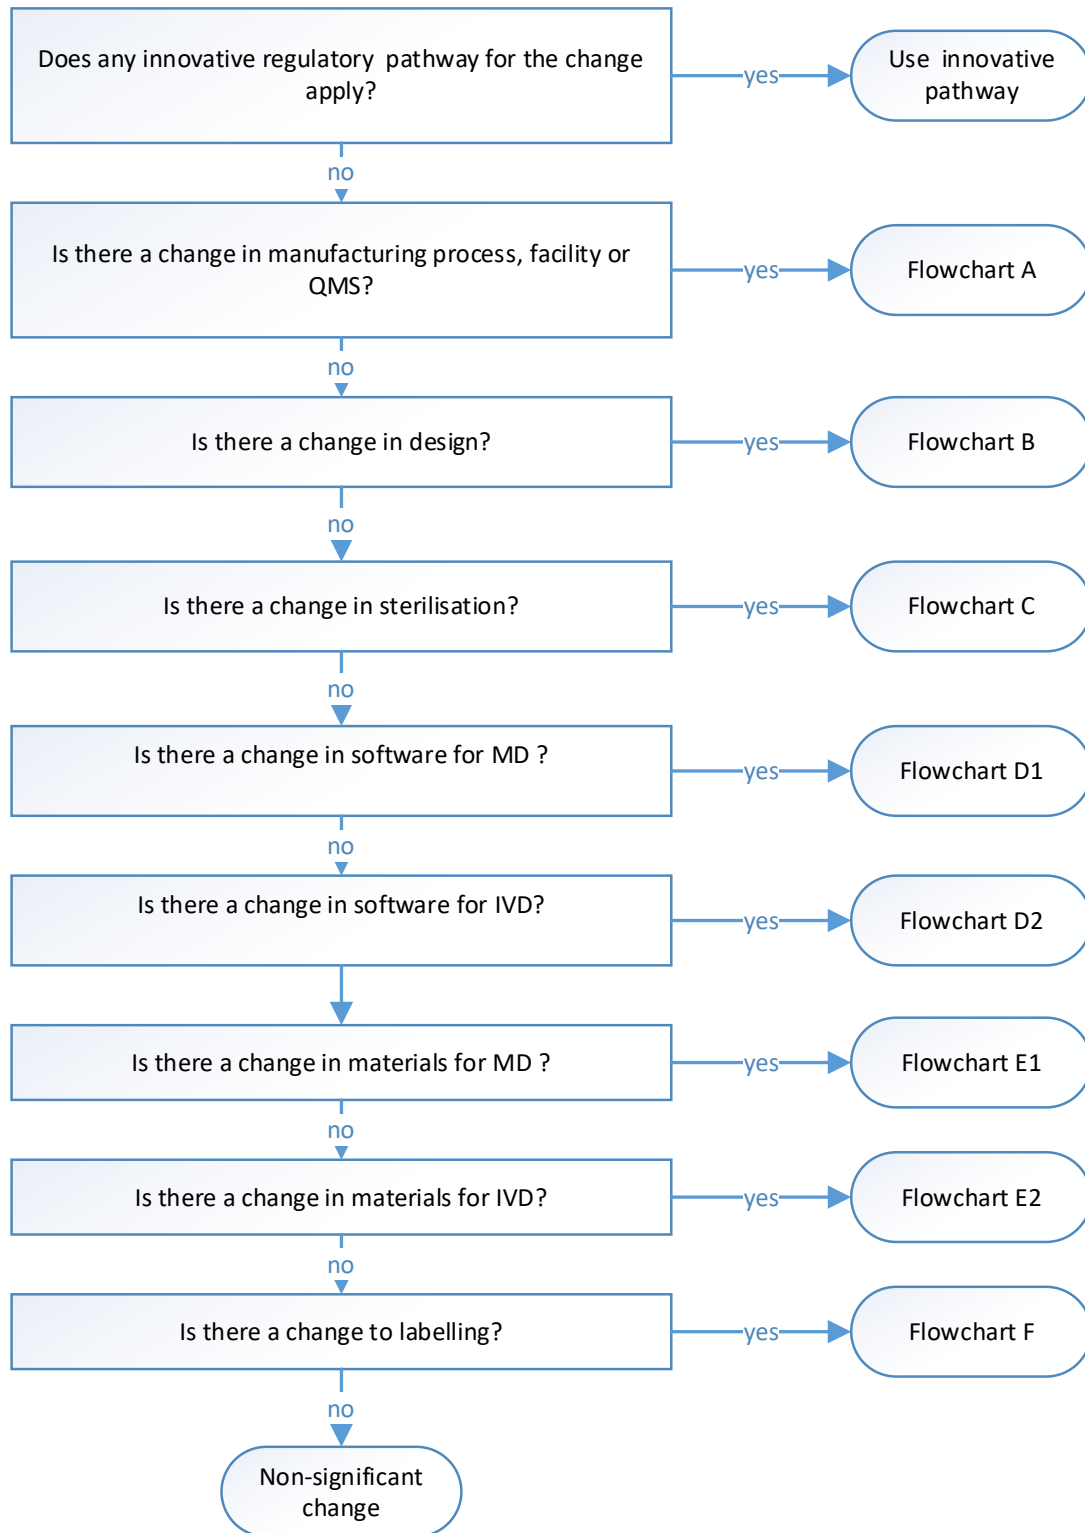

473 **8.5 (Pre)certification Program for Innovative Medical Device Manufacturer**

474 Innovative Medical Devices refer to medical devices that meet an unmet clinical need or meet
475 a need in a way that is superior to existing methods in terms of safety and effectiveness. Innovative
476 Medical Devices can be designated by regulatory authorities to encourage and assist their
477 development in a number of ways (for example, as a breakthrough device). Additionally,
478 manufacturers that can demonstrate excellence in consistently developing devices to a high-
479 standard of safety may also be recognised and given further flexibility, this process has been
480 precertification in a US FDA pilot programme.

560

561 **10.0 APPENDIX 2 -Examples of changes and reporting requirements**

562 **Changes in manufacturing processes, facility and/or Quality Management System**

Example	Category (Significant, non-significant)
<p>Changes to QMS Certificate, such as:</p> <p><i>Change/addition/removal of manufacturing site, Change of scope</i></p>	Significant
<p>Change to manufacturing processes (including changes made to outsourced processes) that may affect the safety and/or performance/effectiveness of the medical device, such as:</p> <p><i>Change in the equipment used for cutting, resulting in the change in length of sutures. Moulding or cutting manufacturing process Change of centrifugation to filtration process which results in better molecule separation. Change of implant manufacturing process from casting to 3D printing Change from manual operation to automatic operation, without changing the product specification</i></p>	Significant
<p>Change in specification of registered medical device due to change in critical supplier, such as:</p> <p><i>Change in biological components sources or biological manufacturing processes in general Change of supplier of plastic raw material of catheter. Change of supplier of biological component with different manufacturing process</i></p>	Significant
<p>Changes to Manufacturing QC process issues, such as:</p> <p><i>Removal of two test parameter or modification of acceptance criteria, change in the sampling processes for QC testing</i></p>	Significant
<p>Changes to QMS Certificate, such as:</p> <p><i>Change of zip code on the certificate, typo errors and correction</i></p>	Non-Significant
<p>Changes to Manufacturing QC process, such as:</p> <p><i>New QC specification with additional testing Change of measuring and/or monitoring equipment without changing test parameter</i></p>	Non-Significant
<p>Changes to Manufacturing QC process issues, such as:</p> <p><i>Change in non-critical supplier that extrudes the polymer tubing with no change in finished product performance specifications.</i></p>	Non-significant

563

564

Changes in design for medical devices

Example	Category (Significant, non-significant)
<p>All changes to the control mechanisms, operating principles and/or design characteristics of a medical device, such as:</p> <p><i>Change from a quantitative assay to a qualitative assay</i> <i>Addition of a footswitch to an X-ray system that previously do not operate via a footswitch mechanism.</i> <i>Change of a substrate of an immunological test.</i></p>	Significant
<p>Change in the design characteristics that allows for additional or broader intended use/indication for use, such as:</p> <p><i>A smaller sized hip prosthesis or fracture fixation screw that are significantly different from their predicate designs.</i> <i>Addition of urine as specimen in the intended use/indication for use for creatinine test</i></p>	Significant
<p>Change that have Pre-clinical and/or clinical data identified new risks that adversely affects the safety and/or performance/effectiveness of the device, such as:</p> <p><i>The original heat-sealing package barrier found risk of leakage and change to sterile packaging barrier</i></p>	Significant
<p>Change results of a risk analysis undertaken during the design validation process raise new issues of safety and/or performance, such as:</p> <p><i>Change from an internal direct current (DC) power source to an external alternating current (AC) source or vice versa</i> <i>During the clinical validation process, ceramic dental cap has found durability issues, other materials has to be considered Change to the cable design and grip of a steerable ablation catheter, which results in improved deliverability and improved procedural times.</i></p>	Significant
<p>Change to the design, manufacturing or components whether it change its intended performance or not, such as:</p> <p><i>All changes in specifications (including shelf life and stability) of an IVD medical device</i> <i>Changes in biological or chemical components of reagents</i></p>	Significant
<p><i>Change of the secondary packaging with no impact on storage conditions or stability</i></p>	Non-significant
<p><i>Change of colour of the cap of a reagent</i></p>	Non-significant

565

566

Changes to sterilisation facility and its process and/or Quality Management System

567

Example	Category (Significant, non-significant)
Change of the sterilisation process, such as: <i>Change from ethylene oxide to gamma radiation sterilization</i>	Significant
Change that increases the bioburden alert or action levels or that introduces a more difficult to kill organism, such as a change that introduces additional pre-sterilisation transport steps.	Significant
Device design or material change that introduces a more difficult to sterilize feature, such as: <i>Change to the packaging where a single pouched sterile device is put into a double pouch.</i>	Significant
<i>Change from biological indicator to parametric release or change from batch release to parametric release</i>	Significant
<i>Change in moist heat sterilisation parameters</i>	Significant
<i>Change from a pre-blended sterilant (EtO and CHCs) to EtO post-blended with nitrogen. The ultimate concentration of EtO in the sterilant is the same in both cycles.</i>	Non-significant
<i>Change from using Air (mixture of 80% Nitrogen and 20% Oxygen) to pure Nitrogen in the aeration process to avoid explosive gas mixtures.</i>	Non-significant

568

Changes to Software for Medical Devices and IVD Medical Devices

Example	Category (Significant / Non-Significant)
<p>Change to software which impacts the control of the device that may be alter diagnostic or therapeutic function, such as: <i>Software change causing the change of critical steps for laser delivery on eye treatment</i></p>	Significant
<p>Change to software initiated by manufacturer that modifies the algorithm that affects the diagnostic or therapeutic function, such as: <i>An X-ray Lung Nodule Assessment Software is used along with a Digital Radiography System to support physicians in the visualization, identification, evaluation and reporting of pulmonary lesions/nodules in chest images. An algorithm change improves the detection rate for small nodules.</i> <i>Changes in the software that modifies the quality controls interpretation or cut off calculation of an IVD</i></p>	Significant
<p>Change to software with addition of new features or software applications that affect any diagnostic or therapeutic functions of a medical device, such as: <i>Insulin Pump - Software changes that allow for wireless communication with compatible (continuous) blood glucose monitors.</i></p>	Significant
<p>Change to software that includes addition or removal of alarm function, such that a response to this change affect the treatment of patient, such as: <i>Electrocardiogram Addition to software of an early warning alarm to signal a potential cardiac event such as atrial fibrillation.</i> <i>Modification of the software to add or remove alarms to monitor the diagnostic procedure on an infectious disease analyzer</i></p>	Significant
<p>Change to software that affect the safety and performance/effectiveness of the registered medical device such that treatment or diagnostic of the patient is altered, such as:</p> <ol style="list-style-type: none"> <li data-bbox="209 1547 1129 1653">1. <i>Blood Oxygen Monitor - A software change that allows the monitor to report blood CO2 concentrations with higher accuracy up to 0.5% deviation.</i> <li data-bbox="209 1693 1129 1798">2. <i>Upgrade of software version changes the performance characteristics like specificity or sensitivity of the In-vitro diagnostic medical device.</i> 	Significant
<p>Change to software incorporating a change to the operation system platform, such as: <i>A change in the software together with operating system change from Linux to another operating system platform.</i></p>	Significant

Change management to registered Medical Devices
GHWP/WG2-WG1-WG3/P001:2023

<i>A simple bug fix to correct the display error on the data table from the software analysis result.</i>	Non-significant
<i>Change in software which only introduces non-therapeutic and non-diagnostic features such as printing, faxing, improved image clarity or reporting format</i>	Non-significant
<i>Change in software to disable certain functions that does not interact with other functions</i>	Non-significant
<i>Addition or change of OS version(s) which does not backward compatible. For example: From Windows to iOS.</i>	Significant
<i>Change for compatible with large OS update patch within the same platform. Such as: From Windows X 21H1 to Windows 21H2</i>	Non-significant
Change in software to alter colors and location of menu on graphic user interface of medical devices that does not affect safety and performance/effectiveness of the device but results in version change and doesn't alter usability of the interface	Non-significant
Change in software to add languages for users that does not accompany changes in the main features and misunderstanding in translation for intended use/indication for use, principle of operation, and performance/effectiveness	Non-significant
Change in the distribution/storage method of software among physical media (USB, CD, DVD), digital means (download), etc.	Non-significant
Change in software to strengthen the cybersecurity such as: <i>1. Adding encryption to the configuration file of the device,</i> <i>2. Adding passcode requirements for remote users, in addition to the password needed to access the device., and</i> <i>3. Adding a timeout for remote user or changing the access of the restricted user/customer to appropriate levels.</i>	Non-significant
Change in software to disallow use of the specific characters that are invalid as defined in the instrument host interface specification for the prevention of Specimen Identification (ID) barcode information truncation.	Non-significant
Change in software to return the system into specification of the most recently cleared device regarding DICOM(Digital Imaging and Communications in Medicine standard; http://dicom.nema.org/) conformance allowing the automatic fetching of prior studies from radiology information system using PACS (Picture Archiving and Communication System).	Non-significant
Change in software to correct the bottle size parameter of the cleaning solution to prevent the fluid detection errors.	Non-significant

Change management to registered Medical Devices
GHWP/WG2-WG1-WG3/P001:2023

Change in IVD analyzer software to ensure new data of the administrative records for reagents is not merged with the existing data in the table within the software by correcting software code in the control unit of the analyzer to modify the table to add new columns.	Non-significant
Changes in software including the addition of product indication for use or its operating principles including diagnostic algorithm such as machine learning that may alter diagnostic or therapeutic function.	Significant
Change in accuracy of Machine Learning Medical Device software via modification and expansion of the training dataset without any changes to labeled product design specification.	Non-Significant
Change in IVD analyzer software to rewrite an incorrectly worded software requirement and to modify code in the control unit of the analyzer without modifying the core algorithm (such as detection or measurement module algorithm).	Non-significant

570
571

572

Changes in materials for medical devices

Example	Category (Significant, non-significant)
<p>Change in radiation source (e.g. radioisotopes) or type of medicinal substances in the medical devices that incorporate medicinal substances in an ancillary role, such as:</p> <p><i>Change in the drug of a drug eluting stent</i></p>	Significant
<p>Change in type, source, processing and/or supplier of biological materials (including cells, tissues and/or derivatives of animal, human, microbial or recombinant origin) without a change in the intended purpose of the biological material, such as:</p> <p><i>Change in source of hyaluronic acid from Streptococcus zooepidemicus to Streptococcus equi</i></p>	Significant
<p>change in material or material formulation (of non-biological origin) including changes to device coating or surface modification technique in a medical device that is intended to make direct/indirect contact with body tissues and fluids or is absorbed by the body, such as:</p> <p><i>Peripherally Inserted Central Catheter (PICC)</i> <i>Introduction of a colorant change into the insertion hub of a PICC that is part of the fluid path for fluid administration or withdrawal from a patient.</i> <i>Cardiovascular Catheter</i> <i>A change of material to a cardiovascular catheter that comes in contact with body tissue (e.g. change to/from polyether block amide (PEBA), Polyamide or polyether ether ketone (PEEK)).</i></p>	Significant
<p>Change to concentration or drug specification of medicinal substances in medical devices that incorporate medicinal substances in an ancillary role, such as:</p> <p><i>Change in the concentration of the drug in a drug eluting stent</i> <i>Change in the concentration of antibiotics or a change to a different antibiotic in a catheter coated with antibiotic Catheters that coated with antibiotics</i></p>	Significant
<p><i>Change in supplier or vendor of non-critical material, but the material meets the manufacturer's previously reviewed specification.</i></p>	Non-significant
<p><i>Peripherally Inserted Central Catheter (PICC)</i> <i>Introduction of a colorant change into the flush port of a PICC. The flush port is an access port for flush syringes for IV line clearance or volume block and is not intended to be used for fluid administration or withdrawal from a patient.</i></p>	Non-significant

573

574

Changes in materials for IVD medical devices

575

Example	Category (Significant, non-significant)
<p>Changes which need testing of additional samples, such as:</p> <p><i>Change of sources or types of materials (conjugate, antibodies, antigens, primers or substrate)</i></p> <p><i>Change to the sample preparation, such as the inclusion of a stabilizer for an IVD that is intended to simplify preparation requirements or increase sample stability.</i></p>	Significant
<p>Change in material, which results in design specifications change, such as:</p> <p><i>Formulation changes of reagents of test kits (buffer concentration, addition of preservatives)</i></p> <p><i>Change in the synthesis/purification methods of biologicals components</i></p> <p><i>Change from a liquid to solid reagent and vice versa</i></p>	Significant
<p><i>A change in supplier or vendor of the non-critical material, but the material meets the manufacturer's previously reviewed specification.</i></p>	Non-significant
<p><i>Change of sources of non-critical materials, such as magnesium stearate from an animal to vegetable source in a reagent of an IVD kit with no change in performance specification.</i></p>	Non-significant

576

577

Changes to Labelling

578

Example	Category (Significant, no-significant)
<i>All changes to the labelling of medical devices that involve addition, removal and/or revision of warnings, precautions and/or contraindications not arising due to safety and/or performance concerns</i>	Significant
<i>Labelling changes that modify the approved method of use; or involve a change from 'professional use only' to 'home use'</i>	Significant
<i>Change involves a reduction of intended use/indication for use not arising due to medical device safety and/or performance concerns</i>	Non-significant, but generally reportable
<i>Changes to the label due to typo error</i>	Non-significant

579
